

"Humanity is not the first nor will be the last creation of intelligent beings. Perhaps millions of years ago a similar species existed which mastered technologies only to face its own demise by an unfortunate series of events. Maybe remnants of super ancient societies are mixed in with the archaeological evidence uncovered to this day; inadvertently skewing results and confusing us further when trying to solve the riddle of our past. If evolution evolved once it's likely evolution has evolved before in other ways or continues to evolve simultaneously on other worlds."

**Ancient Earth
Mysteries**

*Our ancestors are still
shaping the world we live in today.*

"Humanity is not the first nor will be the last creation of intelligent beings. Perhaps millions of years ago a similar species existed which master technologies only to face its own demise by an unfortunate series of events. Maybe remnants of super ancient societies are mixed in with the archaeological evidence uncovered to this day. The results could be confusing us further when trying to solve the riddle of our past for this reason. If evolution evolved once, it seems likely evolution has evolved before in other ways as it continues to evolve simultaneously on other worlds." -- J.C. Vintner
